## Four-in-a-Row: Recognising Numbers

The aim of the game is to be the first player to get four numbers in a row. Player A rolls a ten-sided dice then tries to find a square on the grid with a picture that matches this number. If they can find one, they then put a coloured counter on the square (or colour it in using their chosen colour). Player 2 then has their go in the same way. Keep going until someone has covered 4 in a row.
